

Areas in which it can be used

SolarCool ColdShed

1. Farmers are largely engaged in grapes as well as resins; this product can be used in storage of resins. Pre cooling of grapes is under testing currently and cannot be provided right now, but this product can be used to store grapes after pre-cooling is done.
2. Farmers can use floriculture producing flowers like rose, jarbera, etc. These flowers have less shelf life and due to extreme heat they can be spoiled very easily. Cold Shed is an appropriate product for storage of different flowers increasing their shelf life, reducing losses and increasing the profit of farmers.
3. Pomegranates, Bananas, Sapota, Watermelons and Guava are some of the fruits. This product provides the right kind of refrigerated storage for all these fruits, thus increasing their life and minimizing wastage and increasing profits.
4. This product is very useful in keeping vegetables fresh for a longer period of time, maintain their hygiene and nutritional value and also reducing their wastage, empowering farmers with high negotiable value.
5. Cold Shed can be used in areas like Dairy. It is useful in milk collection centres since milk has to be collected from very remote areas and on daily basis which poses high threat of spoilage before delivering to the processing facilities.
6. This product can be used in various other areas like Poly houses, sea foods, medicines, blood banks, etc .

This product can also be used for different fruits and vegetable markets
